

Tree pits are used to promote the healthy growth of trees within paved areas. This tree island is used in centre of road parking areas outside the Central City.

The tree island size is typically 5000 x 2600mm. Size varies to suit existing road widths, parking areas and vehicle turning conditions.

Trees are to be of good form, health, structure and free of pests and disease. Tree species to be chosen in collaboration with the City of Melbourne, Urban Landscapes Branch.

The tree pit is typically surrounded by a precast concrete kerb: (Refer to Design Standard 302.01)
