Elevation (Front)

The stainless steel slatted seat is used in the Central City and Docklands where people can sit for extended periods and where the provision of a back rest would be desirable.

Seats should be positioned to take advantage of summer shade, winter sun and any interesting views or activities.

Seats are generally placed at a minimum of 50m intervals and are orientated to face away from the kerb with an 800mm setback from kerb face.

The seat is to be fabricated from grade 316 stainless steel. The seat is fixed within the pavement surface using a gib key and socket detail.

For fabrication & installation drawings, refer to City of Melbourne, City Design drawings; Project No: 5016 - Seat with back Stainless Version
