CITY SERVICES, COMMUNITY AND CULTURAL DEVELOPMENT COMMITTEE REPORT COVER SHEET

Agenda Item 5.2

3 August 2004

ROAD MANAGEMENT ACT

Division Assets & Services

Presenter Gordon Duncan, Principal Engineer Infrastructure

Purpose

To:

- seek approval of a number of actions required in accordance with the provisions of the *Road Management Act 2004* ("the Act"), including adoption of a Road Management Plan, and the declaration of a number of roads in the municipality as being reasonably required for general public use; and
- consider a proposal from VicRoads for Council to enter into an agreement to continue to maintain
 after 31 December 2004, those arterial roads which were previously declared main roads, over
 which VicRoads is now the road authority.

Time Frame

The majority of the provisions of the Act came into force on 1 July 2004, however under the provisions of the *Transport (Highway Rule) Act* Council retains non-feasance protection until 31 December 2004. The early adoption of a Road Management Plan will ensure that the implications of the plan and the actions required will be fully established prior to 31 December 2004.

Finance

Under the provisions of the Act, ownership of arterial roads transfers to VicRoads. These roads had previously been included in Council's asset register on the basis that, under the provisions of the Transport Act, Council was the manager of these roads. The value of the roads in question is in excess of \$170M.

Legal

Legal advice has and will continue to be provided in respect to the terms of any long term agreement with VicRoads.

Pursuant to an interim agreement with VicRoads, Council continues to maintain and carry out works on arterial roads until 31 December 2004. VicRoads has requested Council enter into a long term agreement as to the undertaking by Council of maintenance and permanent works on arterial roads after 31 December 2004.

Sustainability

Connected and Accessible City

Improved management of the road network will reduce travel costs through reduced fuel consumption, improved travel times and reduced vehicle operating costs.

Inclusive and Engaging City

There is no significant sustainability impact.

Innovative and Vital Business City

There is no significant sustainability impact.

Environmentally Responsible City

Improvements to asset management will provide for a safer road and footpath environment for the benefit of all users of the road reserve particularly pedestrians and cyclists.

Recommendation

That the City Services, Community and Cultural Development Committee recommend that Council:

- resolve that in accordance with section 17(3) of the *Road Management Act 2004*, the roads detailed in Attachment 2 to the Management Report are reasonably required for general public use;
- adopt the Road Management Plan (Attachment 1 to the Management Report) in accordance with the provisions of the *Road Management Act 2004* and authorise the causing of notice of the making of the plan in accordance with section 55 of that Act;
- resolve in principle that Council is prepared to continue to perform maintenance and permanent works after 31 December 2004, on arterial roads which were previously declared main roads, subject to the negotiation of a satisfactory agreement with VicRoads;
- by instrument of delegation sealed by the Council pursuant to Section 98(1) of the *Local Government Act 1989* and section 118(1) of the *Road Management Act 2004*, delegate to the Chief Executive Officer, or the person from time to time acting in that position, its powers, duties and functions to negotiate and agree arrangements with VicRoads as to the undertaking by Council of maintenance and permanent works on arterial roads after 31 December 2004, to enter into an agreement with VicRoads regarding the undertaking of such works and to do all things necessary and ancillary to the same; and
- by instrument of delegation sealed by the Council pursuant to Section 98(1) of the *Local Government Act 1989* and Section 118(1) of the *Road Management Act 2004*, delegate to the Chief Executive Officer, or the person from time to time acting in that position, its powers, duties and functions as a road authority to resolve that a road is reasonably required for general public use, or that a road is no longer reasonably required for general public use; and
- note that a further report on the outcomes in respect to the VicRoads issues discussed in this report
 will be provided to the City Services, Community and Cultural Development Committee in
 December 2004.

Agenda Item 5.2

3 August 2004

ROAD MANAGEMENT ACT

Division Assets & Services

Presenter Gordon Duncan, Principal Engineer Infrastructure

Purpose

- 1. To:
 - 1.1. seek approval of a number of actions required in accordance with the provisions of the *Road Management Act 2004* ("the Act"), including adoption of a Road Management Plan, and the declaration of a number of roads in the municipality as being reasonably required for general public use; and
 - 1.2. consider a proposal from VicRoads for Council to enter into an agreement to continue to maintain after 31 December 2004, those arterial roads which were previously declared main roads, over which VicRoads is now the road authority.

Background

2. Council, at its meeting on 29 April 2004, resolved as follows:

"That Council:

- note the draft Road Management Plan and approve its release for public distribution and submission on the passing of Road Management Act 2004 ("the proposed Act");
- by instrument of delegation sealed by the Council pursuant to Section 98(1) of the Local Government Act 1989, delegate to the Chief Executive Officer, or the person from time to time acting in that position, its powers, duties and functions to give notice of Council's intention to make a Road Management Plan by public notice in The Age newspaper, and by publication in the Government Gazette, in accordance with the notice requirements in the proposed Act;
- note it is intended that a further report will be submitted to Council in August 2004 for formal adoption of the Road Management Plan following the passing of the proposed Act and the undertaking of the required consultation process; and
- endorse Council entering negotiations with VicRoads regarding the on-going management and maintenance of arterial roads."
- 3. Notification was given in the Government Gazette on 3 June 2004 and in The Age on 3 June 2004, that a draft Road Management Plan (RMP) was available for inspection and that Council would consider any submissions received within the statutory 28 day period prior to adopting a final RMP. Consultation also took place with key stakeholders by direct contact.

Issues

- 4. By the close of the statutory 28 day period, no submissions had been received however comments were received from VicRoads and the Department of Infrastructure in response to Council forwarding the draft RMP to those organisations.
- 5. As a result of receiving these comments some minor amendments were made to the RMP.
- 6. The revised RMP is now recommended for adoption. Following the making of the RMP, the Act requires the Council to cause notice of the making of the RMP, and the place where copies of the RMP may be inspected or obtained, to be published in the Government Gazette and in a newspaper generally circulating in the municipality.
- 7. Under the *Road Management (Interim) Regulations 2004*, Council must conduct a review of its road management plan at four year intervals. The Regulations require Council when proposing to undertake a review of the RMP to give notice in the Government Gazette and in a newspaper generally circulating in the municipality.
- 8. The RMP outlines the proposed management arrangements for Council roads included in its register of public roads. Council is required under the Act to have a register of public roads. A public road is defined as a road in respect of which Council has made a decision that the road is reasonably required for public use, and also roads which have been declared as public highways under section 204(1) of the *Local Government Act 1989*. Other categories of public road are not applicable to Council.
- 9. The attached list details all the roads in the municipality which are proposed to be public roads as it is considered that they are reasonably required for general public use. This list reflects the roads for which Council has had care and management responsibilities for many years, excluding the former Main Roads.
- 10. From 1 July 2004, roads in the municipality which were formerly declared Main Roads became arterial roads under the ownership of VicRoads. Footpaths adjacent to arterial roads remain Council assets, with the demarcation line being the back of kerb. Prior to that date, Council was responsible under the Transport Act for maintenance and permanent works on these roads, and was effectively the manager of the roads.
- 11. Under the provisions of the Act, ownership of arterial roads transfers to VicRoads. These roads had previously been included in Council's asset register on the basis that, under the provisions of the Transport Act, Council had statutory management functions over these roads. The value of the roads in question is in excess of \$170M.
- 12. Council has entered an interim agreement with VicRoads whereby until 31 December 2004 Council will continue to maintain and carry out works on the arterial roads. VicRoads will reimburse Council for costs incurred, up to the standard specified by VicRoads. VicRoads remains the road authority for these arterial roads. A further agreement with VicRoads is being negotiated as to the undertaking by Council of maintenance and permanent works on arterial roads post 31 December 2004.
- 13. To date, Council has received annual funding from VicRoads (approx \$1.3m) to undertake maintenance and works activities on arterial roads, including routine maintenance and planned works such as re-sheeting work. Provision for this amount was made in the 2004/05 budget. This allowance covers works to the "VicRoads Standard". It is expected that some but not all of the \$1.3M allowance will be spent by 31 December 2004.

- 14. To date Council has maintained these arterial roads to a higher standard than that specified by VicRoads, particularly for tree maintenance, grass cutting, irrigation maintenance and street cleaning. Council has always borne the extra costs for the higher standard, and has included these additional costs (estimated at \$250,000) in its 2004/05 budget, as it has done in previous budgets. VicRoads has advised that it has no objection to Council continuing to provide a higher standard of maintenance, but it will not reimburse the extra costs incurred by Council.
- 15. VicRoads has proposed that from 1 January 2005 Council continue to maintain and undertake works on arterial roads, however there are a number of issues to be resolved before agreement can be reached on this matter. These issues include Council's legal liability when performing works on arterial roads, permit approval requirements and funding arrangements. It is proposed that the Chief Executive be delegated the power to negotiate with VicRoads to achieve an outcome to Council's satisfaction, and to sign an agreement at the conclusion of the negotiations prior to 1 January 2005. The outcomes of these negotiations will be reported back to Committee in December 2004.
- 16. If Council decides not to continue to maintain arterial roads, VicRoads has indicated that it will not be able to maintain the roads at the previous standard. This would mean that tree management, the quality and height of grass, litter control and street cleaning standards will all suffer as a result.
- 17. It is unclear whether VicRoads is prepared to delegate any other management role for arterial roads to Council. Accordingly Council is now referring all applications for road openings, street occupancy, crane permits, road closures for works and events etc on arterial roads to VicRoads.
- 18. VicRoads has stated that responsibilities for clearways lie with that organisation.
- 19. In the Act, the definition of "Arterial Road" includes roads that are "a major route for public transport services". Such roads could therefore be declared by VicRoads, in accordance with the provisions of the Act, and be placed under its care and management. Potentially every street with a tram route could be declared as an arterial road, including Swanston Street between Flinders Street and La Trobe Street. Council would have the opportunity to make a submission to VicRoads if such declaration was proposed.
- 20. Another issue yet to be finalised relates to works on roads by utilities. The Act recognises that any works undertaken by utilities on their installations within road reserves have an impact on the Road Authority's management of that road. For this reason a Code of Practice, "Utility Installations in Road Reserves", is in the course of preparation by VicRoads. The Act stipulates that the consent of a Road Authority is required to the conduct of works within road reserves but provides for certain exemptions with general agreement by the Road Authority or by regulation. The extent and nature of these exemptions are still being discussed and the final outcome could have staff resource implications for Council.

Relation to Council Policy

21. As well as meeting the legislative requirements of the Act, the RMP has been developed to underpin strategic directions adopted by the City of Melbourne, particularly *City Plan 2010* and *Transport Program 2003-2006*.

Consultation

22. Formal notification of having developed a draft RMP was published in the Government Gazette and in The Age, with a period of 28 days in which submissions could be submitted to Council. In addition key external stakeholders including VicRoads, DOI, DES, RACV, Bicycle Victoria, Victorian Taxi Association, Yarra Trams, Motorcycle Riders Association and the water utilities were forwarded a copy of the draft RMP.

23. Formal notification of the making of an RMP by Council is required to be published in the Government Gazette and in a newspaper generally circulating in the area.

Recommendation

- 24. That the City Services, Community and Cultural Development Committee recommend that Council:
 - 24.1. resolve that in accordance with section 17(3) of the *Road Management Act 2004*, the roads detailed in Attachment 2 to the Management Report are reasonably required for general public use;
 - 24.2. adopt the Road Management Plan (Attachment 1 to the Management Report) in accordance with the provisions of the *Road Management Act 2004* and authorise the causing of notice of the making of the plan in accordance with section 55 of that Act;
 - 24.3. resolve in principle that Council is prepared to continue to perform maintenance and permanent works after 31 December 2004, on arterial roads which were previously declared main roads, subject to the negotiation of a satisfactory agreement with VicRoads;
 - 24.4. by instrument of delegation sealed by the Council pursuant to Section 98(1) of the *Local Government Act 1989* and section 118(1) of the *Road Management Act 2004*, delegate to the Chief Executive Officer, or the person from time to time acting in that position, its powers, duties and functions to negotiate and agree arrangements with VicRoads as to the undertaking by Council of maintenance and permanent works on arterial roads after 31 December 2004, to enter into an agreement with VicRoads regarding the undertaking of such works and to do all things necessary and ancillary to the same; and
 - 24.5. by instrument of delegation sealed by the Council pursuant to Section 98(1) of the *Local Government Act 1989* and Section 118(1) of the *Road Management Act 2004*, delegate to the Chief Executive Officer, or the person from time to time acting in that position, its powers, duties and functions as a road authority to resolve that a road is reasonably required for general public use, or that a road is no longer reasonably required for general public use; and
 - 24.6. note that a further report on the outcomes in respect to the VicRoads issues discussed in this report will be provided to the City Services, Community and Cultural Development Committee in December 2004.

EXECUTIVE SUMMARY

The City of Melbourne's Road Management Plan (RMP) has been developed to meet the legislative requirements of the **Road Management Act 2004** (the Act) and the strategic directions adopted by the City of Melbourne.

The RMP identifies responsibilities, maintenance standards and inspection regimes required to manage civil liability and must demonstrate that Council, as the road authority, is responsibly managing all the road assets under its control.

The RMP consists of four (4) main elements;

- A register of public roads
 - A list of roads for which the Council is responsible
- A road asset register
 - A list of all assets in the road reserve
 - Valuation of these assets
- A road asset management system
 - An outline of how road assets will be managed to deliver a safe and efficient road network
- A schedule of maintenance standards.
 - The development of responsible maintenance standards to meet community expectations.

The RMP is part of a total asset management strategy that will cover all Council assets. The RMP is not considered to be a new strategy but rather a summary of what is already occurring in the management of road infrastructure assets.

All elements of the RMP are already covered at the City of Melbourne by;

- A register of roads under Council control by listing and in map form;
- Council's SMEC Pavement Management and Road Inventory System;
- The Civil Infrastructure Services Contract (No. 59/2/3208)

Reference is also made to other key Council policies and strategies and consideration is given to these to ensure that the RMP is consistent with the adopted strategic directions.

The key risk areas for the City of Melbourne have been identified as footpaths, roadways and kerb & channel and the management of these are included in the RMP as a priority. Other assets such as drainage, street furniture, signs, lighting and public artworks will be included at a later date but as soon as data collection, report systems and resources allow. The RMP does not at this stage include off-road bike paths or paths in parks.

Whilst it is believed that the RMP demonstrates that the City of Melbourne is responsibly managing its road assets, in line with its policy on continuous improvement, some actions have been identified that will further enhance Council's management in this area.

1. INTRODUCTION

1.1 Background

In order to facilitate the provision of its services to the community, the City of Melbourne manages an extensive range of community assets. One of the most significant group of these assets, with regard to the difficulty and expense of managing, are the road assets.

The Council is totally responsible for approximately 206 kms of local roads, along with associated footpath, kerb & channel and drainage and 13 bridges. These road assets represent an approximate replacement value of \$700m (City of Melbourne Financial Report 2003) so that Council needs to set aside considerable funding in its annual budget just to meet the depreciation of these assets.

Currently the City of Melbourne receives, from the Federal Government, the following financial assistance for its local road network (approximate annual figures);

- \$240,000 from the Victorian Grants Commission
- \$250,000 from the Roads to Recovery Programme.

Both these grants are based on formulae that take a number of criteria into account to determine the appropriate figure for each council. As both these grants have been reducing in real terms, the 'gap' being funded by the community (i.e. via rates) is increasing making it even more important to get value for money with regard to managing these assets.

It is important to note that a safe and efficient road network depends heavily upon successfully managing two main components;

- Routine maintenance repairing day to day wear and tear issues like potholes, cracking, uplifts around trees, failing service trenches/installations, etc.
- Renewal/Rehabilitation rehabilitating assets to meet serviceability standards.

Generally, routine maintenance is funded through Council's operational budget while renewal/rehabilitation is funded through the works (capital) budget. In recent years, there has been a change in budget focus on asset replacement as opposed to the acquisition of new assets.

1.2 Road Management Act 2004

Following the High Court decision that changed the common law governing civil liability for road management (nonfeasance defence), the State Government initiated a review of the State's road management legislation. The Transport (Highway Rule) Act was introduced to reinstate protection for road authorities until 1 January 2005. In the meantime, the Road Management Act 2004 (the Act) has been introduced to establish a legislative framework to allow each road authority to determine its own appropriate Road Management Plan (RMP).

Section 50 of the Act states;

"The purposes of a road management plan are having regard to the principal object of road management and the works and infrastructure management principles -

- (a) to establish a management system for the road management functions of a road authority which is based on policy and operational objectives and available resources; and
- (b) to set the relevant standard in relation to the discharge of duties in the performance of those road management functions."

In other words, the RMP identifies responsibilities, maintenance standards and inspection regimes required to manage civil liability and must demonstrate that the authority is responsibly managing all of the road assets within its control. The key risk areas for the City of Melbourne have been identified as footpaths, roadways and kerb & channel and the management of these will be included in the RMP as a priority. Other assets such as drainage, street furniture, signs, lighting and public artworks will be included at a later date but as soon as data collection, report systems and resources allow. The RMP does not at this stage include off-road bike paths or paths in parks.

The Act specifies that the following must be included in the RMP;

- A register of public roads
 - A list of roads for which the Council is responsible
- A road asset register
 - A list of all Council assets in the road reserve
 - Valuation of these assets
- A road asset management system
 - An outline of how road assets will be managed to deliver a safe and efficient road network
- A schedule of maintenance standards.
 - The development of responsible maintenance standards to meet community expectations.

For the City of Melbourne, the RMP is part of a total asset management strategy that will cover all Council assets. The RMP is not considered to be a new strategy but rather a summary of what is already occurring in the management of road infrastructure assets. The development of the RMP has been seen as an opportunity to assess and review the adequacy of asset management at the City of Melbourne and to recommend actions for future improvement.

The development of the RMP was facilitated and coordinated by the Engineering Services Group, having asset management responsibility for road reservations, with assistance from the Asset Services Branch as well as other areas within the City of Melbourne. The project, however, should have benefits for others in that it has initiated more discussion and processes for data collection, the type of formats and how to use the data as a tool to assist with decision making. It is felt that the final

document will greatly assist all asset managers within the City of Melbourne to achieve a consistent approach to responsible asset management.

1.3 Codes of Practice

An important element of the legislative requirements for RMPs is the adopting of Codes of Practice.

The Explanatory Memorandum in the Proposals for a Road Management Bill describes the main purpose of Codes of Practice, namely;

"to set out benchmarks of good practice, to clarify demarcations of responsibility between road authorities and to provide practical guidance for road authorities on the allocation of resources, the development of policies, the setting out of priorities and the making of road management plans".

The RMP has been developed to meet the requirements of the following Codes of Practice (even though at the time of developing the RMP not all the codes had been finalised):

- Road Management Plans
- Clearways on Declared Arterial Roads
- Operational Responsibility for Declared Freeways and Arterial Roads
- Managing Utility Infrastructure in Road Reserves
- Worksite Safety Traffic Management.

The Act states that compliance with a relevant Code of Practice will be admissible as evidence of performance of that function or compliance with the relevant duty.

1.4 City of Melbourne Strategic Direction

The purposes of the RMP are consistent with the direction outlined in two of the City of Melbourne's key strategies, namely City Plan 2010 and Transport Program 2003-2006.

City Plan 2010 sets out what must happen for the decade prior to the year 2010 in order to achieve the City of Melbourne's vision to be a thriving and sustainable city. This vision is based on strategic directions organised around four themes.

One of the themes is "Connection and accessibility" and under Strategic Direction 1.1 the following is stated;

Ensure that the city's transport infrastructure is world-competitive and supports the Victorian economy.

Promoting the City of Melbourne as the "gateway to Victoria" and insuring transport infrastructure is well managed, efficient and competitive will help us to draw on the City's existing strengths and to position the City in the global marketplace.

Objectives

• Position Melbourne nationally and internationally as Australia's transport hub and gateway

- Ensure continual development, improvement and integration of major transport infrastructure so that the City of Melbourne is recognised as having world-class competitive transport that supports business and tourism needs in rural, national and international markets
- Enhance links between Melbourne's key transport infrastructure, including the port, airport and rail network

Along similar lines, the aim of the Transport Program 2003-2006 is "to ensure the municipality has a sustainable and highly integrated transport system that services the City's needs".

The program cites the following major objectives;

- To improve pedestrians amenity within the municipality with a particular concentration within the CBD,
- To improve the quality of amenity and safety in the vicinity of public transport-related facilities,
- To reduce road congestion by improving the efficiency of vehicular access to the CBD.

The RMP has been developed to meet the legislative requirements of the Road Management Act and the strategic directions adopted by the City of Melbourne.

1.5 Definitions

Generally, the definitions contained in the Road Management Act 2004 have been adopted in this document. Other definitions, specific to the City of Melbourne or not listed in the Act, are set out below.

"CBD" Central Business District.

"Civil Infrastructure Services Contract" Part of the City of Melbourne's road management system that covers the design, construction and maintenance elements for Council's road infrastructure and assets. Standards, levels of service and performance targets are specified in the contract documents.

"DOI" Department of Infrastructure (State Government).

"DSE" Department of Sustainability and Environment (State Government).

"ESG" Engineering Services Group, a branch of the City Assets & Services Division, City of Melbourne.

"Pavement" refers to the structural part of the roadway (not footpath), generally made up of crushed rock, stabilised soil or asphalt.

"SMEC" Snowy Mountains Engineering Corporation Road Management System, which is utilised by the City of Melbourne as its road inventory and pavement management system.

"Subgrade" means the natural ground on which the road pavement sits.

"Vantive" means the City of Melbourne's customer requests and tracking system.

"Wearing Course (Seal)" refers to the top 15 to 35 mm of the road surface, usually bituminous or asphalt material.

2. PART A – REGISTER OF PUBLIC ROADS

2.1 Register Content

Under section 19 of the Act, Council "...must keep a register of public roads specifying the roads in respect of which it is the coordinating authority". The register comprises a listing of road names and a map which describes those roads or part of roads which are Council's responsibility. The aim is to include the Register of Public Roads on the City of Melbourne's electronic data base system so that access will be by highlighting a map reference or street name and being able to bring up the relative technical detail required. This last piece of work will take some time to finalise, however, it will result in improved access by all stakeholders to the register data.

Appendix 1 shows a copy of the City of Melbourne municipal map which indicates the boundary of the municipality, but does not include all the roads on the register of public roads.

ACTION 2.1

To allow for easier access to the information contained in the Register of Public Roads, the relevant data should be made available electronically at the City of Melbourne's public counters.

Completion Date: December 2004.

2.2 Data Source

The information used to compile the register has been obtained from City of Melbourne records such as the Government Gazette, Parish Maps, subdivision plans, written agreements with government departments or private individuals, etc. For some of the older roads and laneways, no written records were available and decisions about responsibility had to be made based on history or management practice.

2.3 Road Hierarchy

A large proportion of the roads within the municipality have a unique nature due to the enormous daily influx of road users in the form of pedestrians, public transport users and private motorists. This has resulted in the decision not to adopt a formal road hierarchy meaning that the maintenance standards and intervention levels are the same for all Council roads.

The only activity for which a road category is nominated is for surveillance frequencies which have been adopted as part of the Civil Infrastructure Services Contract (No. 59/2/3208) (refer clause 4.2). Five categories are specified as listed in **Table 2.3.**

Whilst the decision to adopt these service levels for the various road categories is considered effective, the situation should be monitored and reviewed in line with the renewal of the Civil Infrastructure Services Contract or sooner if there is a change of resources allocated by Council to road maintenance.

Table 2.3

Road Hierarchy as Specified in the Civil
Infrastructure Services Contract

Activity Category	Road Hierarchy Definition
A	High profile and high usage streets and areas; e.g.: Bourke Street and Swanston Street
В	Active Central Business District (CBD) lanes and suburban shopping centre strips; e.g.: Lygon Street, Errol Street, and Hardware Street
С	CBD streets, and arterial and main roads; e.g.: Exhibition Street, Queen Street, and Rathdowne Street
D	CBD service lanes; e.g.: Bullens Lane and Lygon Lane
Е	Suburban residential and industrial streets and lanes; e.g.: Park Street, George Street, Westbourne Road, Lloyd Street, Mugg Lane and Leopold Lane

ACTION 2.3

A Road Hierarchy along with appropriate service levels should be considered in line with the renewal of the Civil Infrastructure Services Contract or sooner if there is a change of resources allocated by Council to road maintenance. Completion Date: September 2005.

2.4 Partnerships

2.4.1 Agreements with Other Road Authorities

Although the Road Register is meant to define primary responsibility, the Map supporting the City of Melbourne's Register of Public Roads will show all roads and the responsibility authority for management of these roads. Any "other State Road Authority" roads (eg VicRoads, DOI, DSE, roads) located on non-Council land will be noted as such. If Council is involved in maintaining these roads, the relevant department or agency can sign an Agreement with Council to deliver services to contract. These particular roads would need to be listed on the department's Road Register and the department would have management responsible.

The adoption of the Operational Responsibility for Declared Freeways and Arterial Roads Code of Practice and the finalising of the agreement with VicRoads regarding the delegation of some responsibilities on arterial roads, should clarify the important demarcation issues between the City of Melbourne and VicRoads.

At the time of developing the RMP, discussions were still taking place regarding the formation of these Agreements.

ACTION: 2.4.1

In order to clarify primary responsibility and maintenance arrangements on non-Council roads, Agreements between the City of Melbourne and other State Road Authorities should be finalised as soon as possible.

Completion Date: End December 2004.

2.4.2 Arrangements with Utilities

The Act recognises that any works undertaken by utilities on their installations within road reserves have an impact on the Road Authority's management of that road. For this reason a Code of Practice, "Utility Installations in Road Reserves", has been introduced which requires Road Authority consent to the conduct of works within road reserves but provides for certain exemptions with general agreement by the Road Authority or by regulation.

The development of regulations for appropriate exemptions from requirements to obtain consent or provide notifications (qualified or conditional as required) is in all stakeholders' interest to satisfy the needs and concerns of the parties.

At the same time, ESG needs to look at the way it manages processes and resources in this area to ensure that utility works within the road reserve are adequately managed.

At the time of developing the RMP, discussions were still taking place regarding the finalisation of the Code of Practice.

ACTION: 2.4.2

As the issue of utility works in road reserves is recognised as a key risk element in road management, it is imperative that the Code of Practice, "Utility Installations in Road Reserves" be finalised as soon as possible.

Completion Date: End December 2004.

3. PART B - ROAD ASSET REGISTER

3.1 Asset Management Direction

The City of Melbourne has shown its commitment to ensuring the extensive community assets for which it is responsible are properly managed by setting up a new area within the organisational structure called the Asset Services Branch.

The Asset Services Branch is responsible for integrating and co-ordinating all asset management systems and data bases within Council. The aim is to develop a consistent approach for utilising quality processes for data collection and process analysis so that total integration of asset data is assured.

The RMP is seen as being only one component of a total asset management strategy that covers all of Council's assets.

3.2 Road Asset Register Content

The Act requires a Road Authority to establish a road asset register for the purpose of ensuring that the Road Authority performs its statutory duty to maintain public roads.

Council's Road Asset Register records the location, type, capacity, condition, configuration and quantity of roads assets for which it is responsible. A history of these assets including any alterations, deletions and changes are also included where this information is available. The register also records details of the valuation of infrastructure assets (eg replacement value, depreciation) in accordance with relevant accounting standards.

The Road Asset Register is a key element of Council's overall records management system that will enable it to comply with the evidentiary provisions of the Act and maintain records of defects or other matters requiring repair or maintenance that are found on inspection or reported to Council, together with the details of proposed and completed repair and maintenance works.

The "Operational Responsibilities for Declared Freeways and Arterial Roads" Code of Practice clarifies some of the generic demarcation of responsibility of assets issues, however, other issues, specific to the City of Melbourne, will be covered by an agreement between the Council and VicRoads.

Within the road reservation of Municipal Roads and Arterial Roads, Council is responsible for the assets identified in **Table 3.2**, unless covered in the above code of practice or otherwise agreed with VicRoads.

Table 3.2 Council Responsibility for Road Assets by Road Type

Road Type	Municipal Roads	Arterial Roads
Roadway (structural pavement & wearing surface, excluding the area of roadway required for tram purposes and safety zones, and for rail crossings)	YES	NO
Footpath and shared paths	YES	YES (Except on Bridges)
Kerb & channel	YES	NO
Drainage (pipes, culverts & pits)	YES	YES
Bridges	YES	NO
Signs (traffic, parking and informative, excluding signs owned by VicRoads and other agencies)	YES	YES
Council-owned Public lighting	YES	YES
Street furniture	YES	YES
Parking Control Devices	YES	YES
Public art	YES	YES
Trees	YES	YES (Subject to agreement with VicRoads)
Irrigation Systems	YES	YES (Subject to agreement with VicRoads)
Median Strips	YES	YES (Subject to agreement with VicRoads)

Information about these assets is recorded in various data systems within the City of Melbourne and the development of the RMP has facilitated the opportunity to bring all data together under one system. The priority has been to finalise the Road Asset Register in regard to roadways, footpath and kerb & channel initially with the various other assets being brought into the register as soon as data collection, report systems and resources allow.

It should be noted that not all of Council's road assets are located on Council roads. In some cases assets, such as signs, might be owned by Council but located on a VicRoads road for instance. Similarly, a VicRoads asset might be located on a Council road, e.g. traffic signals.

ACTION 3.2

The City of Melbourne has commenced work on integrating its various asset data bases to optimise the information available. To ensure a consistent approach, it is important that work continues on finalising all road asset elements under the one system.

Completion Date: June 2006.

3.3 Pavement Management (SMEC)

The City of Melbourne has managed its key road assets by adopting the SMEC Pavement Management and Road Inventory System which has been in place for a number of years. The system was originally designed as an inventory, condition summary and budget planning tool for road pavements only but it has the capability to act as an asset register for footpath and kerb and channel as well.

The SMEC System acts as a repository for data on the City of Melbourne's Register of Public Roads and the roadway, footpath and kerb & channel elements on the Road Assets Register for which Council is responsible.

3.4 SMEC Reports

The following are typical reports that can be produced by the system to assist with decision making regarding prioritising works or justifying budget allocations.

The type of reports that can be produced for footpath and kerb & channel data does not currently have the same sophistication as that for the roadway data, however, average condition information is still very useful for setting priorities.

SMEC will be producing an upgrade to its current software package that will enable more detailed reporting for the footpath and kerb & channel elements of road assets.

The upgrade to the SMEC System along with further development of Council's other financial and data recording systems, will greatly assist decision making regarding asset management.

F8

Figure 3.4.2 – Typical Kerb & Channel Report Showing Average Condition By Type

6.298276

1,205.0

15

OTHER

With the footpath and kerb & channel data, the reports produced can only identify an average condition for the whole network. The data does not contain enough detail to identify particular sections of footpath and kerb & channel. In other words, the system cannot accurately produce a list of the worst streets for footpath, for instance.

With the examples above, the information produced shows that the various types of footpath and kerb & channel in the municipality are, on average, in very good condition. A condition score of 7 and above would be the aim.

The information that can be produced from the roadway data, however, is much more detailed so that more sophisticated reports can be produced. With this element, therefore, it is possible to compile a list of the worst roads and use this information to determine priority works

Figure 3.4.3 – Typical Budget Report Showing How Different Funding Scenarios Can Effect Road Condition in the Future.

The information can also be very useful in providing funding scenarios as part of Council's budget process. The chart above shows the effect various funding scenarios have on the overall condition of the road network (the higher the pavement condition index (PCI) the better). In this case, scenario 0 represents what would happen in future years to the condition of the roads if there was no spending on rehabilitation and resheets. The other scenarios reflect the effect of differing amounts of expenditure on roads. The aim is to maintain a PCI of 5 or better.

ACTION: 3.4

Continue to develop the SMEC System, along with Council's other financial and data recording systems, with a view to refining the type of information available from the footpath and kerb & channel data in order to be able to produce reports which can better assist with decision making.

Completion Date: June 2005

, e

4. PART C – ROAD ASSET MANAGEMENT SYSTEM

4.1 Policy and Budgetary Framework

The City of Melbourne has used the following asset management frameworks in developing a road asset management system that best meets Council's needs in discharging its duty to inspect, maintain and repair public roads:

- Integrated Asset Management Guidelines for Road Networks (AP-R202) 2002, Austroads Inc.
- International Infrastructure Management Manual (IIMM) 2002, IPWEA.
- MAV Asset Management Improvement STEP Program Road Asset Management Plan Framework 2003.
- Council and VicRoads Design and Construction Guidelines

Other inputs have included national, State and local government policies and objectives.

Road asset management involves the management of both physical assets and the aspects of the use and operation of those assets that affects the condition of the asset. It applies to all road assets, including the road, structures, roadside and road infrastructure.

The road asset management system provides the direction for all asset management activities linked to the Council's annual business planning cycle within the context of delivering a safe and efficient road network to meet affordable community needs taking into account the resources available.

Most elements of Council's Road Asset Management System are covered by the Civil Infrastructure Services contract.

4.2 Civil Infrastructure Services Contract

The City of Melbourne's Civil Infrastructure Services (CIS) contract has been in place for a number of years and was developed to help meet the objectives of the Council's strategic directions which were adopted following an extensive community consultation process. These strategic directions are reviewed annually as part of the Council's corporate planning and budget processes.

The service specification for this contract describes the scope of the service as;

Generally, CIS involves the following;

- *The routine maintenance of:*
 - (i) roadways, laneways, footways and other paved surfaces using asphalt, bluestone and other materials;

- (ii) stormwater drainage systems, including kerb and channel constructed from various materials, and associated pits and grates;
- (iii) parking and traffic signs, and other signs, including street and information signs, using wherever possible;
- (iv) pavement markings and associated traffic control devices, and
- (v) street furniture items.
- The design and construction of new and refurbished civil infrastructure asset installations in accordance with an approved Works Program and associated Council budget, where these works have a project value of less than \$200,000;
- The provision of a reinstatement service to support Council's "Road Opening Permit" (ROP) process;
- The provision of support services for Special Events;
- The provision of support services for Emergency Management events;
- The maintenance of Council's stormwater and flood control pumping stations, including associated mechanical and electrical services;
- The provision of customer management services, including the use of shared software systems and databases with Council, and
- The provision of information management services, including the management of technical and drawing databases, and the use of shared software systems and databases with Council.

The specifications for the provision of this service cover;

- The setting of engineering standards for the design and construction of new and refurbished civil infrastructure;
- The standards and intervention levels for the carrying out of routine maintenance;
- The surveillance frequencies;
- The consultation process;
- Recording maintenance works and program actions;
- Auditing completed maintenance works;
- Documentation and maintenance of a Quality Plan, an Occupational Health & Safety Plan, an Environmental Management Plan and Risk Management Plan;
- Setting Key Performance Indicators to measure meeting targets and standards;
- Council and contractor to participate in an "Innovation Committee";
- Formal annual reviews to be conducted of the service.

Appendix 2 shows a summary of maintenance standards, intervention levels and surveillance frequencies used in the CIS contract.

Page 19 of 32 August 2004

As part of ESG's Quality Procedures, the CIS contract is managed by developing a **Contract Management Plan** which provides a framework by which the contract can be managed and Council and authorised parties can ascertain compliance with proper contract management principles.

The various standards covered in the CIS contract have been reviewed and are still considered to be appropriate levels of service for the City of Melbourne.

The CIS specifications will be reviewed before the current contract period ends in June 2006. With that review the scope, standards, levels of service and performance targets should be considered along with any other relevant issues identified in the RMP.

$\overline{\text{ACTION } 4.2}$

The CIS contract specifications should be reviewed to consider scope, standards, levels of service and performance targets along with other relevant issues identified in the RMP.

Completion Date: September 2005.

4.3 Other Elements of the Road Asset Management System

4.3.1 Analysis of Accident Data and Traffic Counts

The City of Melbourne continually analyses accident data and traffic counts to ensure a safe and efficient road network for all road users.

Council's **Road Safety Plan, 2004** aims to provide the means to create a significantly safer street environment for vulnerable road users over the next 3 years. In order to achieve this, the Plan:

- Explores the crash statistics across the City of Melbourne and discusses the conditions experienced by vulnerable road users
- Identifies key road safety concerns across the municipality
- Identifies key behavioural issues that exacerbate all crash casualty figures
- Has devised a programme of social and practical actions that will aid the promotion of a safer street environment across the municipality.

The Plan includes the process for analysing incident patterns and for the prioritising of appropriate actions.

Traffic counts are recorded annually or as required on key routes throughout the municipality to keep abreast of any change in travel patterns, for both vehicles and pedestrians. For example, in recent years, the introduction of new infrastructure like City Link and Docklands has had a significant impact on the traffic flows within the CBD which has meant some adjustments were required to meet new road user needs.

ACTION 4.3.1

In order to analyse any changing travel patterns, Council should continue to monitor accident data and traffic counts.

Completion Date: Annual Programme.

4.3.2 Analysis of Insurance Claims

The City of Melbourne has developed a comprehensive process for dealing with insurance claims regarding incidents occurring within the road reserves for which the Council is responsible. These claims are monitored and analysed to pick up any trend with regard to unsafe elements within the road reserves. This work was difficult, however, as earlier records of insurance claims were not very precise with regard to a detailed description of the incident and the exact location where it had occurred. Recently, the format of recording has been changed to include more useful data which can more easily be formatted and analysed.

This new format will allow for easier and more precise analysis of the insurance claims and make it possible to produce summary reports showing such information as incident type and exact location which can then be tied into the maintenance programme for that particular asset to facilitate the assessment process.

In recent years, the City of Melbourne's insurance claims history, regarding incidents involving roads assets, has been low. Considering there is a daily influx of over 500,000 visitors to the CBD, this fact gives some reassurance that road assets are in good condition and well maintained.

ACTION 4.3.2

In order to identify any trends with regard to unsafe elements on Council roads, it is important that insurance claims for all incidents occurring within the road reservations, continue to be effectively monitored.

Completion Date: Ongoing Programme.

4.3.3 Priorities

As part of the Council's annual business planning cycle, a number of factors are considered in helping to develop priorities that best meet community needs.

Expenditure on roads must compete with other Council services so there is a real need for the community to understand what is required to manage, at a sustainable level, all assets for which Council is responsible. This information is constantly communicated to the community so that the feedback can be used to decide on priorities.

Council uses the following to assist in prioritising its expenditure on the road network, with the emphasis being placed on asset replacement;

- Council's corporate plan;
- Council's financial strategy;
- Surveillance;
- Funding from other government sources eg VicRoads:

- Community complaints and requests;
- Feedback form various community groups;
- Analysis of accident data;
- Monitoring of annual traffic counts;
- Analysis of insurance claims;

4.3.4 Surveillance

A critical element of managing road assets is obtaining up to date information on the condition of the assets. At the City of Melbourne, this information is collected in a number of ways;

- Regular inspections as part of the day to day maintenance of the road network (this is covered by the CIS contract).
- Periodic road condition surveys (refer clause 5.1).
- Programmed inspections that collect information on all aspects of road assets.
- Community footpath audits.

Programmed inspections are the subject of the **ESG Surveillance Plan** which is currently being developed. This plan covers a programme of random checks across the road network using self-assessment, specific checklists and post-process reviews to ascertain information on;

- Legibility (parking and traffic signs)
- Content (including accuracy and fact)
- Technical merit and competence
- Compliance with specifications or policy (audits)
- Acquisition of appropriate approvals

Information obtained is then recorded on a data base.

This plan is seen as an important way of demonstrating that ESG is effectively managing its road assets.

As effective road asset management revolves around managing the risk, risk based surveillance should be considered for the ESG Surveillance Plan rather than just having a programme of random checks. This would involve identifying those high risk road assets and designing a surveillance programme that ensured these elements were being appropriately maintained to minimise the risk. The lower risk assets could then be audited under a random system.

The community footpath audits are an initiative of Council's Injury Prevention Advisory Committee which is made up of a group of stakeholders internal and external to the City of Melbourne. The audits entail members of the community (specifically older people and people with disabilities) monitoring the condition of the footpaths in their local areas and reporting the findings to Council.

This programme adds value to Council's overall surveillance process and helps to ensure any risks on footpaths are kept to a low level.

ACTION 4.3.4

In order to augment Council's quality management of its road assets, it is important that the ESG Surveillance Plan be finalised with consideration being given to incorporating a risk based surveillance programme.

Completion Date: March 2005

4.3.5 Periodic Reviews

With changing circumstances like Citylink, Docklands and the introduction of such innovations as tram superstops effecting the CBD area and the diminishing road funds available from government sources, it is necessary to conduct periodic reviews of asset management strategies and objectives to ensure that the maintenance programme has delivered the expected benefits to road users, stakeholders and the community.

Information obtained from Council's Road Asset Register (refer clauses 3.3 and 3.4) regarding the overall condition of the road assets and the depreciation levels, also must be considered when reviewing the maintenance programme. If a trend is starting to show that the overall condition of the assets is declining, then strategies and objectives may need to be altered to arrest that trend. This could involve adjusting the maintenance programme to focus on those areas that require more attention at the expense of other areas. In other words, changing priorities.

ACTION 4.3.5

That periodic reviews of asset management strategies and objectives take place as part of Council's business planning and budget processes to ensure that an appropriate maintenance programme is in place.

Completion Date: Annual Council Cycle.

4.3.6 Reporting of Achievements

A key element of responsible asset management is informing the community about targets for the coming year and reporting achievements at the end of the year so that the community gains an understanding of the efforts required to manage, at a sustainable level, Council's road network. This process is undertaken at the City of Melbourne by involving the community in the annual business planning and budget processes and by reporting asset management achievements, against planned targets, in Council's annual report.

5. PART D - MAINTENANCE STANDARDS

5.1 Road Condition Surveys

Responsible asset management relies on having up to date information about the asset and what affects that asset. It is therefore necessary to conduct periodic surveys to monitor road pavement, road surfacing, structure, and roadside condition at specified intervals depending on the asset, its condition at the previous survey, the volume and nature of road usage, and any risk to safety. As part of this process, service level definitions for each road asset component will need to be reviewed prior to commencing any new contracts, or renewing existing contracts, in order to ensure that sustainable service levels are maintained.

At the time of developing this RMP, the City of Melbourne was having such a survey conducted to obtain more current information on its road network.

ACTION 5.1

In order to obtain up-to-date information on Council's road assets, road condition surveys are to be conducted on the whole road network every 4 years. Completion Date: July 2004 and then every 4 years.

5.2 Routine Maintenance Standards and Inspections

As covered in clause 4.2, Council's CIS contract specifies maintenance standards, intervention levels and inspection frequencies for maintaining the road network. One of the contract requirements calls for the service provider to provide an annual review of the services provided covering such issues as;

- Workload
- Operating costs
- Areas of risk
- Assessment of meeting the requirements of the Quality, Environmental Management and Occupational Health and Safety Plans
- Ways on increasing the flexibility and efficiency of the service.

This annual review should be viewed in conjunction with the periodic reviews referred to in clause 4.3.5 to assess the current level of service and make appropriate adjustments that better meet the needs of road users.

The key elements of the maintenance programme, i.e. the standards, intervention levels and the inspection frequencies, should be viewed as being dynamic due to the changing nature of the requirements needed to provide a quality service.

ACTION 5.2

That any relevant issues raised in the CIS contract annual review be referred to the appropriate officers involved with the periodic reviews mentioned in clause 4.3.5 so that a comprehensive assessment can be made of the maintenance programme.

Completion Date: Annual CIS contract review.

6. CONCLUSION

6.1 **Summary**

Developing this Road Management Plan has proved to be a valuable exercise in reviewing the way the City of Melbourne currently manages its road assets, assessing whether processes and procedures meet the requirements of the Act and the Council's strategic directions and in looking at ways to improve asset management standards.

As was stated at the outset, the RMP is not about developing a new strategy but rather presenting a summary of what is already occurring in the management of road infrastructure assets. Whilst it is believed that the RMP demonstrates that the City of Melbourne is responsibly managing its road assets, in line with its policy on continuous improvement, some actions have been identified that will further enhance Council's management in this area.

6.2 **Related Implications**

As there are still some unresolved issues identified in the RMP, e.g. the agreements with other state road authorities (particularly VicRoads), agreements with utilities, the development of the ESG Surveillance Plan, etc, there may be some additional resources necessary to deliver the requirements stated in the RMP.

There is a real need, therefore, that Council and all road users understand and recognise the level of funding required, both in works and management, to effectively and efficiently manage the road network.

ACTION.6.2

That once the implications of all actions specified in the RMP are known, Council needs to review the allocation of resources for the management of road assets and make any necessary adjustments to resource levels.

Completion Date: December 2004.

6.3 **List of Actions**

The following is a summary of the actions identified in the development of the RMP. It should be noted that, while most of these actions are Council's responsibility, some of the actions will need to be completed by others.

ACTION 2.1

To allow for easier access to the information contained in the Register of Public Roads, the relevant data should be available electronically at the City of Melbourne's public counters.

Completion Date: December 2004.

ACTION 2.3

A Road Hierarchy along with appropriate service levels should be considered in line with the renewal of the Civil Infrastructure Services Contract or sooner if there is a change of resources allocated by Council to road maintenance.

Completion Date: September 2005.

ACTION: 2.4.1

In order to clarify primary responsibility and maintenance arrangements on non-Council roads, Agreements between the City of Melbourne and other State Road Authorities should be finalised as soon as possible.

Completion Date: End December 2004.

ACTION: 2.4.2

As the issue of utility works in road reserves is recognised as a key risk element in road management, it is imperative that the Code of Practice, "Utility Installations in Road Reserves" be finalised as soon as possible.

Completion Date: End December 2004.

ACTION 3.2

The City of Melbourne has commenced work on integrating its various asset data bases to optimise the information available. To ensure a consistent approach, it is important that work continues on finalising all road asset elements under the one system.

Completion Date: June 2006.

ACTION: 3.4

Continue to develop the SMEC System, along with Council's other financial and data recording systems, with a view to refining the type of information available from the footpath and kerb & channel data in order to be able to produce reports which can better assist with decision making.

Completion Date: June 2005

ACTION 4.2

The CIS contract specifications should be reviewed to consider scope, standards, levels of service and performance targets along with other relevant issues identified in the RMP.

Completion Date: September 2005.

ACTION 4.3.1

In order to analyse any changing travel patterns, Council should continue to monitor accident data and traffic counts.

Completion Date: Annual Programme.

ACTION 4.3.2

In order to identify any trends with regard to unsafe elements on Council roads, it is important that insurance claims for all incidents occurring within the road reservations, continue to be effectively monitored.

Completion Date: Ongoing Programme.

ACTION 4.3.4

In order to augment Council's quality management of its road assets, it is important that the ESG Surveillance Plan be finalised with consideration being given to incorporating a risk based surveillance program.

Completion Date: March 2005.

ACTION 4.3.5

That periodic reviews of asset management strategies and objectives take place as part of Council's business planning and budget processes to ensure that an appropriate maintenance programme is in place.

Completion Date: Annual Council Cycle.

ACTION 5.1

In order to obtain up-to-date information on Council's road assets, road condition surveys are to be conducted on the whole road network every 4 years. Completion Date: July 2004 and then every 4 years.

ACTION 5.2

That any relevant issues raised in the CIS contract annual review be referred to the appropriate officers involved with the periodic reviews mentioned in clause 4.3.5 so that a comprehensive assessment can be made of the maintenance programme.

Completion Date: Annual CIS contract review.

ACTION.6.2

That once the implications of all actions specified in the RMP are known, Council needs to review the allocation of resources for the management of road assets and make any necessary adjustments to resource levels.

Completion Date: December 2004.

ROAD MANAGEMENT ACT

Under the provisions of the Act, ownership of arterial roads transfers to VicRoads. These Roads had previously been included in Council's asset register on the basis that, under the provisions of the Transport Act, Council was the manager of these roads. The value of the roads in question is in excess of \$170M. It has been decided to remove these roads from the Council's register in the financial year ended 30 June 2004.

Kerrie Jordan

Acting Manager Financial Services

LEGAL ATTACHMENT

ROAD MANAGEMENT ACT

Legal advice has and will continue to be provided in respect to the terms of any long term agreement with VicRoads.

Pursuant to an interim agreement with VicRoads, Council continues to maintain and carry out works on arterial roads which were formerly dedicated main roads, until 31 December 2004. VicRoads has requested Council enter into a long term agreement as to the undertaking by Council of maintenance and permanent works on these roads after 31 December 2004.

The report accurately summarises the salient features of the *Road Management Act 2004* ("Act") in particular those in respect to the adoption of the Road Management Plan and the content of the Public Road Register.

Once the Road Management Plan is adopted by resolution of Council, section 55 of the Act requires its adoption to be published in the Government Gazette and a newspaper generally circulating in the municipal district.

Where a Council in its capacity as road authority resolves a road is reasonably required for general public use, section 17(1) of the Act provides that such road becomes a public road under the Act and is required to be placed on the Council's register of public roads. If the Council decides a road is no longer reasonably required for public use, section 17(4) of the Act requires the road be removed from the Council's public road register.

Alison Lyon Manager Legal & Governance
